sustainability charter

At the EPA we recognise that we all have an impact, individually and collectively, on the environment, economy and people of Queensland. Sustainability is good practice, not only for the environment but also for business and the community. By working together to improve the quality of life of all Queenslanders, and by respecting cultures, customs and social values in our actions, we can achieve sustainability.

This is our Sustainability Charter.

We will take care of:

- ▶ Ourselves
- ▶ Each other
- ▶ Our environment

We show our commitment through the:

- ▶ Choices we make
- ▶ Actions we take
- ▶ Respect we show others

We all aim to:

- ▶ Reduce the environmental impact of the EPA's activities
- ▶ Value people as the EPA's most important asset
- ▶ Support our colleagues with the knowledge needed to become a sustainable organisation
- ▶ Provide a work environment that is safe, secure, adaptive and diverse
- ▶ Share knowledge, engage and build mutual understanding

We see the development of a sustainability culture as a journey.
